

Pensacola Bahia

Pensacola Bahia can be used for pasture, lawns, commercial sites, parks/recreation sites, erosion control, golf course and athletic field turf. Pensacola Bahia can be used alone but is commonly used in conjunction with other warm season species as part of erosion control mixes. Pensacola Bahia is suitable for sandy soils and is very drought tolerant. It has medium to large leaf texture with a light to medium green color. Pensacola Bahia requires less fertilization than other warm season grasses.

Field Planting Rate	50-100 lb/acre
Lawns	5-10 lb/1000sq ft
Seeding Depth	1/4"
Emergence Time	7-21 days
Planting Date	April - July
Seeds Per Pound	200,000-250,00
Preferred pH	5.5 – 6.5
